¹All Age-Adjusted rates are 3-year rates per 100,000 and are calculated using the 2000 Standard US Population. These rates also use July 1 Florida population estimates from the Florida Legislature, Office of Economic and Demographic Research. Click for trend graph. Trends not available for BRFSS data.

Age-adjusted cancer incidence rates are not displayed for fewer than 10 cases (NA)

²Quartile

Most favorable situation 1 (25% of counties)	Average 2 or 3 (50% of counties)	Least favorable situation 4 (25% of counties)
---	---	--

Quartiles in this report allow you to compare health data from one county to another in the state. Quartiles are calculated by ordering an indicator from most favorable to least favorable by county and dividing the list into 4 equal-size groups. In this report, a low quartile number (1) always represents more favorable health situations while fours (4) represent less favorable situations.

Quartiles not available for age-adjusted cancer incidence rates (NA).

³Healthy People 2020 goals are single-year rates per 100,000 population (or percentages) at the national level. Goals are not available for all indicators.

⁴Includes primary and contributing diagnoses.
