Re: Radionuclides Rule Revisions for Nontransient Noncommunity drinking water systems and Grandfathering Provisions  
G & F MCGEE FARM WORKER HOUSING, PWS ID 6291454

Dear MARCUS GLENN AND FRANCES WILLIAMSON:

The Florida Administrative Code, Chapter 62-550.310, 62-550.519 and 62-550 Tables 7 and 8 were revised and became effective June 24, 2014. The revisions require non-transient non-community water systems to begin monitoring for Gross Alpha, Radium 226, Radium 228 and Uranium in 2016. Initial monitoring will be for four quarters beginning January 1, 2016.

Chapter 62.519 allows systems to use historical data taken between January 1, 1996 and December 31, 2015 to reduce the monitoring to sampling once in 2016:

- You must have one sample from each point of entry for gross alpha and radium 228
- The Gross Alpha must be below 15 pCi/L
- You must either have sampled for radium 226 or substitute gross alpha if it is less than 5 pCi/L.
- The combined value for radium 226 and radium 228 must be below 5 pCi/L

We have reviewed your water systems past sampling records and in order to be grandfathered in and avoid the 4 quarters of initial monitoring in 2016 you must sample for Gross Alpha, Radium 226 & 228 and Uranium at the point of entry location. Gross alpha results may be substituted for the required radium-226 measurement as long as gross alpha does not exceed 5 pCi/L. Gross alpha results may be substituted for uranium as long as the gross alpha measurement does not exceed 15 pCi/L by December 31, 2015 and submit the results to our office by January 10, 2016. The results must meet all the criteria listed above.

If you have any questions on the sampling requirements or new revisions to Florida Administrative Code 62-550, please contact me at 813-307-8015, ext. 5934 or by email at [therese.ladouceur@FLHealth.gov](mailto:therese.ladouceur@FLHealth.gov)

The Florida Administrative Code, Chapter 62-550.310, 62-550.519 and 62-550 Tables 7 and 8 were revised and became effective June 24, 2014. The revisions require non-transient non-community water systems to begin monitoring for Gross Alpha, Radium 226, Radium 228 and Uranium in 2016. Initial monitoring will be for four quarters beginning January 1, 2016.

Chapter 62.519 allows systems to use historical data taken between January 1, 1996 and December 31, 2015 to reduce the monitoring to sampling once in 2016:

- You must have one sample from each point of entry for gross alpha and radium 228
- The Gross Alpha must be below 15 pCi/L
- You must either have sampled for radium 226 or substitute gross alpha if it is less than 5 pCi/L.
- The combined value for radium 226 and radium 228 must be below 5 pCi/L

We have reviewed your water systems past sampling records and in order to be grandfathered in and avoid the 4 quarters of initial monitoring in 2016 you must sample for Gross Alpha, Radium 226 & 228 and Uranium at the point of entry location. Gross alpha results may be substituted for the required radium-226 measurement as long as gross alpha does not exceed 5 pCi/L. Gross alpha results may be substituted for uranium as long as the gross alpha measurement does not exceed 15 pCi/L by December 31, 2015 and submit the results to our office by January 10, 2016. The results must meet all the criteria listed above.

If you have any questions on the sampling requirements or new revisions to Florida Administrative Code 62-550, please contact me at 813-307-8015, ext. 5934 or by email at [therese.ladouceur@FLHealth.gov](mailto:therese.ladouceur@FLHealth.gov)

The Florida Administrative Code, Chapter 62-550.310, 62-550.519 and 62-550 Tables 7 and 8 were revised and became effective June 24, 2014. The revisions require non-transient non-community water systems to begin monitoring for Gross Alpha, Radium 226, Radium 228 and Uranium in 2016. Initial monitoring will be for four quarters beginning January 1, 2016.

Chapter 62.519 allows systems to use historical data taken between January 1, 1996 and December 31, 2015 to reduce the monitoring to sampling once in 2016:

- You must have one sample from each point of entry for gross alpha and radium 228
- The Gross Alpha must be below 15 pCi/L
- You must either have sampled for radium 226 or substitute gross alpha if it is less than 5 pCi/L.
- The combined value for radium 226 and radium 228 must be below 5 pCi/L

We have reviewed your water systems past sampling records and in order to be grandfathered in and avoid the 4 quarters of initial monitoring in 2016 you must sample for Gross Alpha, Radium 226 & 228 and Uranium at the point of entry location. Gross alpha results may be substituted for the required radium-226 measurement as long as gross alpha does not exceed 5 pCi/L. Gross alpha results may be substituted for uranium as long as the gross alpha measurement does not exceed 15 pCi/L by December 31, 2015 and submit the results to our office by January 10, 2016. The results must meet all the criteria listed above.

If you have any questions on the sampling requirements or new revisions to Florida Administrative Code 62-550, please contact me at 813-307-8015, ext. 5934 or by email at [therese.ladouceur@FLHealth.gov](mailto:therese.ladouceur@FLHealth.gov)

SAM ASTIN III  
PO BOX 3837  
PLANT CITY, FL 33563

Re: Radionuclides Rule Revisions for Nontransient Noncommunity drinking water systems and Grandfathering Provisions  
SAM ASTIN RMH #2, PWS ID 6295418

Dear SAM ASTIN III:

The Florida Administrative Code, Chapter 62-550.310, 62-550.519 and 62-550 Tables 7 and 8 were revised and became effective June 24, 2014. The revisions require non-transient non-community water systems to begin monitoring for Gross Alpha, Radium 226, Radium 228 and Uranium in 2016. Initial monitoring will be for four quarters beginning January 1, 2016.

Chapter 62.519 allows systems to use historical data taken between January 1, 1996 and December 31, 2015 to reduce the monitoring to sampling once in 2016:

- You must have one sample from each point of entry for gross alpha and radium 228
- The Gross Alpha must be below 15 pCi/L
- You must either have sampled for radium 226 or substitute gross alpha if it is less than 5 pCi/L.
- The combined value for radium 226 and radium 228 must be below 5 pCi/L

We have reviewed your water systems past sampling records and in order to be grandfathered in and avoid the 4 quarters of initial monitoring in 2016 you must sample for Gross Alpha, Radium 226 & 228 and Uranium at the point of entry location. Gross alpha results may be substituted for the required radium-226 measurement as long as gross alpha does not exceed 5 pCi/L. Gross alpha results may be substituted for uranium as long as the gross alpha measurement does not exceed 15 pCi/L by December 31, 2015 and submit the results to our office by January 10, 2016. The results must meet all the criteria listed above.

If you have any questions on the sampling requirements or new revisions to Florida Administrative Code 62-550, please contact me at 813-307-8015, ext. 5934 or by email at [therese.ladouceur@FLHealth.gov](mailto:therese.ladouceur@FLHealth.gov)

Re: Radionuclides Rule Revisions for Nontransient Noncommunity drinking water systems and Grandfathering Provisions  
MILLENNIUM CENTER, PWS ID 6296164

Dear MILLENNIUM CENTER:

The Florida Administrative Code, Chapter 62-550.310, 62-550.519 and 62-550 Tables 7 and 8 were revised and became effective June 24, 2014. The revisions require non-transient non-community water systems to begin monitoring for Gross Alpha, Radium 226, Radium 228 and Uranium in 2016. Initial monitoring will be for four quarters beginning January 1, 2016.

Chapter 62.519 allows systems to use historical data taken between January 1, 1996 and December 31, 2015 to reduce the monitoring to sampling once in 2016:

- You must have one sample from each point of entry for gross alpha and radium 228
- The Gross Alpha must be below 15 pCi/L
- You must either have sampled for radium 226 or substitute gross alpha if it is less than 5 pCi/L.
- The combined value for radium 226 and radium 228 must be below 5 pCi/L

We have reviewed your water systems past sampling records and in order to be grandfathered in and avoid the 4 quarters of initial monitoring in 2016 you must sample for Gross Alpha, Radium 226 & 228 and Uranium at the point of entry location. Gross alpha results may be substituted for the required radium-226 measurement as long as gross alpha does not exceed 5 pCi/L. Gross alpha results may be substituted for uranium as long as the gross alpha measurement does not exceed 15 pCi/L by December 31, 2015 and submit the results to our office by January 10, 2016. The results must meet all the criteria listed above.

If you have any questions on the sampling requirements or new revisions to Florida Administrative Code 62-550, please contact me at 813-307-8015, ext. 5934 or by email at [therese.ladouceur@FLHealth.gov](mailto:therese.ladouceur@FLHealth.gov)

NICK PULLARO  
17880 N US HWY 41  
LUTZ, FL 33549

Re: Radionuclides Rule Revisions for Nontransient Noncommunity drinking water systems and Grandfathering Provisions  
HERITAGE STATION OFFICE PARK, PWS ID 6296274

Dear NICK PULLARO:

The Florida Administrative Code, Chapter 62-550.310, 62-550.519 and 62-550 Tables 7 and 8 were revised and became effective June 24, 2014. The revisions require non-transient non-community water systems to begin monitoring for Gross Alpha, Radium 226, Radium 228 and Uranium in 2016. Initial monitoring will be for four quarters beginning January 1, 2016.

Chapter 62.519 allows systems to use historical data taken between January 1, 1996 and December 31, 2015 to reduce the monitoring to sampling once in 2016:

- You must have one sample from each point of entry for gross alpha and radium 228
- The Gross Alpha must be below 15 pCi/L
- You must either have sampled for radium 226 or substitute gross alpha if it is less than 5 pCi/L.
- The combined value for radium 226 and radium 228 must be below 5 pCi/L

We have reviewed your water systems past sampling records and in order to be grandfathered in and avoid the 4 quarters of initial monitoring in 2016 you must sample for Gross Alpha, Radium 226 & 228 and Uranium at the point of entry location. Gross alpha results may be substituted for the required radium-226 measurement as long as gross alpha does not exceed 5 pCi/L. Gross alpha results may be substituted for uranium as long as the gross alpha measurement does not exceed 15 pCi/L by December 31, 2015 and submit the results to our office by January 10, 2016. The results must meet all the criteria listed above.

If you have any questions on the sampling requirements or new revisions to Florida Administrative Code 62-550, please contact me at 813-307-8015, ext. 5934 or by email at [therese.ladouceur@FLHealth.gov](mailto:therese.ladouceur@FLHealth.gov)

The Florida Administrative Code, Chapter 62-550.310, 62-550.519 and 62-550 Tables 7 and 8 were revised and became effective June 24, 2014. The revisions require non-transient non-community water systems to begin monitoring for Gross Alpha, Radium 226, Radium 228 and Uranium in 2016. Initial monitoring will be for four quarters beginning January 1, 2016.

Chapter 62.519 allows systems to use historical data taken between January 1, 1996 and December 31, 2015 to reduce the monitoring to sampling once in 2016:

- You must have one sample from each point of entry for gross alpha and radium 228
- The Gross Alpha must be below 15 pCi/L
- You must either have sampled for radium 226 or substitute gross alpha if it is less than 5 pCi/L.
- The combined value for radium 226 and radium 228 must be below 5 pCi/L

We have reviewed your water systems past sampling records and in order to be grandfathered in and avoid the 4 quarters of initial monitoring in 2016 you must sample for Gross Alpha, Radium 226 & 228 and Uranium at the point of entry location. Gross alpha results may be substituted for the required radium-226 measurement as long as gross alpha does not exceed 5 pCi/L. Gross alpha results may be substituted for uranium as long as the gross alpha measurement does not exceed 15 pCi/L by December 31, 2015 and submit the results to our office by January 10, 2016. The results must meet all the criteria listed above.

If you have any questions on the sampling requirements or new revisions to Florida Administrative Code 62-550, please contact me at 813-307-8015, ext. 5934 or by email at [therese.ladouceur@FLHealth.gov](mailto:therese.ladouceur@FLHealth.gov)

Dear ASTIN STRAWBERRY PROPERTY MGMT LLC TRUSTEE:

The Florida Administrative Code, Chapter 62-550.310, 62-550.519 and 62-550 Tables 7 and 8 were revised and became effective June 24, 2014. The revisions require non-transient non-community water systems to begin monitoring for Gross Alpha, Radium 226, Radium 228 and Uranium in 2016. Initial monitoring will be for four quarters beginning January 1, 2016.

Chapter 62.519 allows systems to use historical data taken between January 1, 1996 and December 31, 2015 to reduce the monitoring to sampling once in 2016:

- You must have one sample from each point of entry for gross alpha and radium 228
- The Gross Alpha must be below 15 pCi/L
- You must either have sampled for radium 226 or substitute gross alpha if it is less than 5 pCi/L.
- The combined value for radium 226 and radium 228 must be below 5 pCi/L

We have reviewed your water systems past sampling records and in order to be grandfathered in and avoid the 4 quarters of initial monitoring in 2016 you must sample for Gross Alpha, Radium 226 & 228 and Uranium at the point of entry location. Gross alpha results may be substituted for the required radium-226 measurement as long as gross alpha does not exceed 5 pCi/L. Gross alpha results may be substituted for uranium as long as the gross alpha measurement does not exceed 15 pCi/L by December 31, 2015 and submit the results to our office by January 10, 2016. The results must meet all the criteria listed above.

If you have any questions on the sampling requirements or new revisions to Florida Administrative Code 62-550, please contact me at 813-307-8015, ext. 5934 or by email at [therese.ladouceur@FLHealth.gov](mailto:therese.ladouceur@FLHealth.gov)

Re: Radionuclides Rule Revisions for Nontransient Noncommunity drinking water systems and Grandfathering Provisions  
RUTH MORRIS MLC, PWS ID 6296372

Dear ASTIN STRAWBERRY PROPERTY MGMT LLC TRUSTEE:

The Florida Administrative Code, Chapter 62-550.310, 62-550.519 and 62-550 Tables 7 and 8 were revised and became effective June 24, 2014. The revisions require non-transient non-community water systems to begin monitoring for Gross Alpha, Radium 226, Radium 228 and Uranium in 2016. Initial monitoring will be for four quarters beginning January 1, 2016.

Chapter 62.519 allows systems to use historical data taken between January 1, 1996 and December 31, 2015 to reduce the monitoring to sampling once in 2016:

- You must have one sample from each point of entry for gross alpha and radium 228
- The Gross Alpha must be below 15 pCi/L
- You must either have sampled for radium 226 or substitute gross alpha if it is less than 5 pCi/L.
- The combined value for radium 226 and radium 228 must be below 5 pCi/L

We have reviewed your water systems past sampling records and in order to be grandfathered in and avoid the 4 quarters of initial monitoring in 2016 you must sample for Gross Alpha, Radium 226 & 228 and Uranium at the point of entry location. Gross alpha results may be substituted for the required radium-226 measurement as long as gross alpha does not exceed 5 pCi/L. Gross alpha results may be substituted for uranium as long as the gross alpha measurement does not exceed 15 pCi/L by December 31, 2015 and submit the results to our office by January 10, 2016. The results must meet all the criteria listed above.

If you have any questions on the sampling requirements or new revisions to Florida Administrative Code 62-550, please contact me at 813-307-8015, ext. 5934 or by email at [therese.ladouceur@FLHealth.gov](mailto:therese.ladouceur@FLHealth.gov)
